14 April 2014
Berlin, Germany

Solutions with optical, mechanical and electronic components – Berliner Glas Group at Optatec 2014

At Optatec (20 – 22 May 2014 in Frankfurt / Main, Germany) the Berliner Glas Group will present examples of its optical key components, assemblies and systems.

The company will display e.g. opto-mechanical components and systems like the ones that are included in a laser communications terminal that was launched successfully into outer space on board Sentinel-1A, a polar-orbiting satellite, on 03 April 2014. Furthermore, an intraoral camera to scan teeth in 3D that Berliner Glas, together with its customer, developed and now produces in series as well as an electrostatic wafer chuck for the semiconductor industry will be exhibited at Optatec. By means of the technically advanced, high-precision chuck demonstrator the step-by-step set-up of an electrostatic chuck will be presented and explained.

The Berliner Glas Group – with its headquarters in Berlin and additional companies in Southern Germany, Switzerland and China as well as a sales office in the US – supplies the global players of selected market segments of the light-using industries – semiconductor industry, medical technology, metrology, laser and space technology, analytics, defense and the display industry. In cooperation with the customers the Berliner Glas Group creates innovative system solutions using optical, mechanical and electronic components and thus provides a significant contribution to the value chain of its customers.

Visit us at Optatec – booth E29 in hall 3.0.

About Berliner Glas:

The BERLINER GLAS GROUP (www.berlinerglas.com) is one of the leading European providers of optical key components, assemblies and systems as well as high-quality refined technical glass. With more than 1,100 employees, BERLINER GLAS develops, produces and integrates optics, mechanics and electronics into innovative system solutions for its customers. As OEM partners from prototyping to volume production, the BERLINER GLAS GROUP companies serve innovative customers in various market segments - semiconductor industry, medical technology, metrology, laser and space technology, analytics, defense and the display industry.
